ROBOTS

Early on at the start of the game, you will learn how to use hacking Charges at robot enemies. Such tools are good for use against armies of robots, where you can kill multiples at once.

By holding the L1 button or LB you can see your hack-able robot targets. Focus on the robots you need to hack down, and then take your hands off the attack button, when the silhouette starts to glow red. This also allows you to take control of the robot, including its weapons and firing mechanisms. You can also allow the robot to self-destruct, eliminating all nearby enemies in the process.

MASTER AERIAL COMBAT

Considering that you're fighting in space this time, this game has more complex battle sequences than normal versions. Targets may be difficult to hit, where you need to hold down the L2 button to gain target locks for accurate hits. You also have the overheat feature for your weapons, where you need to make sure you swap when your weapon is too hot. In addition to shooting enemies, you're also going to be taking down missiles coming at you! This occurs mainly by launching flares at the rocket while being locked on. Such flares have cool-down timers, so use of them should be conservative.

PICK UP EVERY GUN

Picking up every gun you come across isn't just for use. It's also for the information. You can log guns and profile them after pick-ups, so you know their features,

strengths, ad weaknesses.

Also, you may find yourself picking up a gun that is aesthetically pleasing. This is something that many enemies will do, where the guns they drop might look cooler than yours!

CHOOSE A SUITABLE LOADOUT

Finding weapons that suit your style of play is very vital. This is another reason to pick up weapons, where you can decide which guns fit your style the most. You may be for example, a fan of high rate of fire of the Assault Rifles, but may find that a submachine gun can provide you with better DPS that may suit your needs, while reloading faster. You may be a fan of close combat and close-shooting, where a shotgun in this case will assist you.

Load outs should be customized specifically for major missions. Always make sure that the weapons you take with you, are the most comfortable weapons that you can find. This allows for maximum performance.

DON'T FORGET YOUR SHIELD IN CALL OF DUTY: INFINITE WARFARE

Picking up shields is like picking up weapons, it is something we recommend you do often. There are shields that you can pick up from enemies killed at the start of your game, and such shields should be utilized whenever possible. This is done through holding the L1 button, where the shield absorbs certain amounts of damage, while allowing you to move forward. Those shields are also strong for melee attacks, where one-shot killing enemies is a capacity of those equipment pieces.

This shield is highly recommended for those who prefer close combat. When used in tandem with high impact weapons, you may find yourself gaining a high kill count.

Quick tips

Like any other shooting game, focus here is the key to combat success. Regardless of all the visuals and aesthetics, always make sure you have the basics down, such as map navigation to check for close enemies on your mini-map. It allows you to catch them, before they open fire on you, especially if they're hiding.

Additionally, when shooting an enemy, focus on the hit markers which will inform you whether the attacks hit or missed the mark. Using a weapon with strong recoil potency, you may miss a ton, meaning that you need to target well when using such weapons. Wild shooting should only be for high DPS weapons.

In the Infinite Warfare version, you're mostly battling in space. This means that targets can be flying, in addition to being on the ground. Make sure you look and aim on top when maneuvering. Also, do not stick on the ground for long, or move against walls, as this makes it easier for you to be a target.

Noise is very important to the game, as it helps with enemy detection. Get a good set of headphones for that, and learn noise recognition as a manner to help you change positions. This especially applies when you're approaching corners, and you do not know what's lying behind.

Infinite Warfare has a slide system that significantly improves maneuverability and close combat. If you're a fan of shotguns and SMG weapons, then this will be a staple trick for you to learn and master. This allows for easier dodging, especially when the actions get to fast-paced, and you need to utilize your reflexes more.

Full-ammo should always be a feature, regardless of game-type. The last thing you want is to be in open-space, and run out of ammunition. Doing so means you need to be on the run, or you need to reload in open space!

Finally, complete the scenes in Zombies within Spaceland, and make sure you never fight zombies without full-load weapons.

Zombies Tips

This section will provide you tips on how to survive and efficiently eliminate

zombies during combat.

UNLOCK PACK-A-PUNCH

This machine upgrades and adds special characteristics to your weapons, for a cost of 5000. You also need to trigger the 4 portals surrounding the map. From there, you can use the central port to reach the machine.

There are 2 portals in Oddyssey into Space, 1 in Kepler System, and 1 in Polar Peak.

Astrocade: At the arcade room in the Journey Into Space area, check the power switch on the wall. The portal is by the power switch.

Galaxy Journey: Still at Journey Into Space, move behind the DJ through the path, for the switch. Then, return behind the DJ to get to the portal.

Kepler System: Return the center map, where you must open the 1st door on your left in Kepler's district, then going upstairs. On the wall is the power switch. Return downstairs to the portal.

Polar Peak: Upstairs at Polar Peak district. Unlock the door to go upstairs, where the power switch is again, on the wall. Go downstairs and seek the portal.
