Dirty, Disgusting, and Deadly

What if a rat scurried into your bed at night? It would probably give you the creeps. Did you know that the rat might try to eat you? Rats have been known to attack people in their sleep. They nibble away at flesh with their sharp front teeth. They often **infect** their **victims** with deadly diseases. Could a rat be waiting for you to fall asleep?

Overrun by Rats

A female rat can have more than 100 babies in a year. Most rat attacks happen in places where rats can easily multiply.

Rat on a Rampage

Anastasia and Alexandra were two infants being treated at a hospital in Russia. Nurses came to feed the sick girls but turned away for a minute. They did not see the furry brown creature climbing into Anastasia's bed.

Clever Climbers

Rats can scurry up walls and race across wires. They can even climb up through pipes and into your toilet!
