CHAPTER 1

If you live in the same region as wild elephants that are roaming freely like asia and africa, you're at risk of damage to your property, livelihood, and even potential injury from marauding elephants who can consume up to 450kg of food a day. Protecting your property in ways that discourage elephants can be done with a little know-how.

Wild elephant attacks have a direct and devastating impact on human life, especially in rural areas where communities live close to elephant habitats. Fatal encounters occur when elephants raid villages, leading to injuries or death. Families suffer not only the physical loss of loved ones but also deep emotional trauma, fear, and displacement. Children often grow up with constant anxiety, and villagers live in a state of tension, disrupting their sense of safety.
